

International trade fair for machine tools, manufacturing and automation technology

Organizer

- Leipziger Messe GmbH

Exhibit dates

- 05.02. – 08.02.2019

Results of Intec 2017

- Exhibitors: 1,020
- Visitors (with Z): 24,200
- Percentage of trade visitors: 97%
- Gross area: 51,250 m²

Product profile

- Tool machines
- Sheet metal forming machines
- Stamping machines and forming equipment
- Material processing systems, laser and welding technology
- Additive manufacturing technologies
- Precision tools, appliances, dies and moulds
- Automated production and robotics
- Measurement technology and quality assurance
- Assembly and materials handling technology
- Drive technology, process control
- Industrial electronics, sensors
- Intralogistics
- Software, IT applications
- Science and research

Event Profile

The Intec is one of the leading trade fairs for the metal working industry in Europe. The 16th iteration of the Intec closed its doors in March of 2017 with resounding success, drawing 1,020 exhibitors from all over Germany and 22 other countries to Leipzig's exhibition center. The countries with the largest share of participants included Italy, Netherlands, Austria, Switzerland and Czech Republic. With regard to Germany, the traditional machinery construction regions of Baden-Württemberg, Bavaria,

North Rhine Westphalia and Saxony were well represented as well, making up three quarters of all exhibitors. With its early date, Intec is an important industry indicator for starting off the year and represents the optimum time for making initial investment decisions. The core visitor region is distinguished by traditionally strong industrial sectors like machinery and plant construction, automotive, chemicals and plastics production.

The Intec has been taking place in conjunction with the Z - International Subcontracting Fair for Parts, Components, Modules and Technologies since 2007. The trade fair combination takes place every two years and is the first important industry get-together for manufacturing technology in the metal processing and supply industry in Europe. Together, both trade fairs cover the entire technological process chain: from raw materials, parts, components and modules through to tools, special-purpose machinery and fully automated processing centers. Exhibitors and visitors alike profit from this combination and the resulting synergy effects.
